DETAILED ACTION

Allowable Subject Matter

1. Claims 1-9 are allowed.
2. The following is an examiner's statement of reasons for allowance:

With respect to the independent claims 1 and 6, prior art fails to disclose or make obvious, in combination with other recited features of the claim limitations, a container device for the long-term storage of hazardous material, particularly for the ultimate disposal of nuclear fuel, comprising: an elongate, cylindrical inner containment body having a casing wall; a hazardous-material body comprising a bundle of rod-shaped nuclear fuel elements; a passageway which extends through at least one of the end walls of the inner containment body and opens into the first compartment, the passageway communicating with the second compartment so that self-compacting concrete can flow from the second compartment into the first compartment; and a passageway for discharging excess of self-compacting concrete from the top of the outer compartment which is provided in the upper end wall of the outer containment body.

. The key element of the invention, which has not been disclosed in the prior art but present in both of the independent claims, is the use of a passageway which extends through the end walls of the inner containment body and opens into the first compartment, the passageway communicating with the second compartment so that self-compacting concrete can flow from the second compartment into the first compartment; and a passageway for discharging excess of self-compacting concrete from the top of the outer compartment which is provided in the upper end wall of the outer containment body.

The dependent claims 2-5 and 7-9 are allowable by virtue of their dependence upon the independent claims 1 and 6, respectively.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. H. Georgii (2006/0021981 A1) discloses a container device for the long-term storage of hazardous material, particularly for the disposal of nuclear fuel, with passageways in the end wall for the introduction of wet concrete. But H. Georgii fails to specifically disclose that the concrete can flow from the second compartment into the first compartment, and that a passageway exists for discharging excess concrete from the top of the outer compartment which is provided in the upper end wall of the outer containment body. Wells et al. (5,848,111 and 5,909,475) disclose a spent nuclear fuel container having a basket of the container comprised of a plurality of stacked interlocking grid storage assemblies.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nikita Wells whose telephone number is (571) 272-2484.
